

Practice

Relations and Functions

State the domain and range of each relation. Then state whether the relation is a function. Write yes or no.

- $\{(-1, 2), (3, 10), (-2, 20), (3, 11)\}$
- $\{(0, 2), (13, 6), (2, 2), (3, 1)\}$
- $\{(1, 4), (2, 8), (3, 24)\}$
- $\{(-1, -2), (3, 54), (-2, -16), (3, 81)\}$

5. The domain of a relation is all even negative integers greater than -9 . The range y of the relation is the set formed by adding 4 to the numbers in the domain. Write the relation as a table of values and as an equation. Then graph the relation.

Evaluate each function for the given value.

- $f(-2)$ if $f(x) = 4x^3 + 6x^2 + 3x$
- $f(3)$ if $f(x) = 5x^2 - 4x - 6$
- $h(t)$ if $h(x) = 9x^9 - 4x^4 + 3x - 2$
- $f(g + 1)$ if $f(x) = x^2 - 2x + 1$

10. **Climate** The table shows record high and low temperatures for selected states.

- State the relation of the data as a set of ordered pairs.
- State the domain and range of the relation.
- Determine whether the relation is a function.

Record High and Low Temperatures ($^{\circ}\text{F}$)		
State	High	Low
Alabama	112	-27
Delaware	110	-17
Idaho	118	-60
Michigan	112	-51
New Mexico	122	-50
Wisconsin	114	-54
